

# BlueBox 1200RO / 2400UF Container

MUCH  
MORE  
WATER

- Water purification and storage system in one
- Safe drinking water for soldiers on NATO operations
- 5.000 litre storage tank inside
- Possible to add additional tank
- Two water purification technologies: RO and UF
- RO: 1200 L/H, UF: 2400 L/H
- Military graded – can operate in Arctic conditions

## Reverse Osmosis and Ultra filtration Military graded – can operate in Arctic conditions

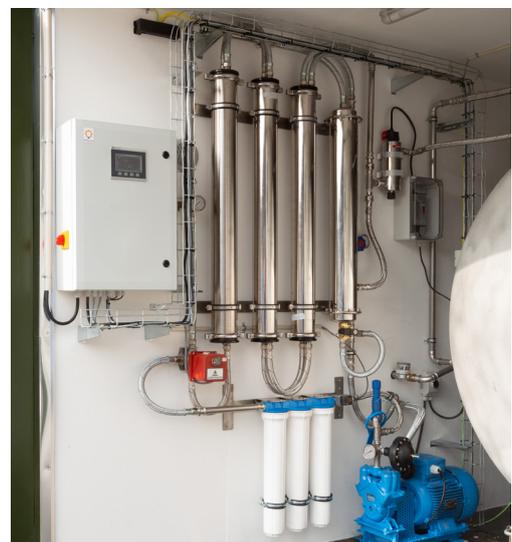

The BlueBox 1200RO / 2400UF is custom built with two water cleaning technologies, offering flexible solutions for clean drinking water.

It is fitted with a military grade air condition system and electrically heated hoses which means it can operate in arctic and equatorial conditions all year round.

Reverse osmosis (RO) delivers up to 1.200 litres per hour and the Ultra filtration (UF) delivers up to 2.400 litres per hour.

It is very easy to switch between the two water purification technologies and there is also room in the container to add an additional tank for UF water.

The combination of RO and UF water purification technologies and the built-in 5.000 litre storage tank makes it ideal for Camps, Field hospitals and Villages.

PURE WATER. ANYTIME. ANYWHERE.
